### **I Support Learning and LearningStation Partner to Provide Schools with Online Story-Centered Curriculum**

KANSAS CITY 11 December 2006 – I Support Learning (ISL), the premier developer of story-centered curriculum, have formed a new strategic partnership with LearningStation in which LearningStation will be the exclusive online provider of the I Support Learning curriculum. Together, the two companies will deliver the first online-delivered story-centered curriculum, engaging students through virtual learning with topics like Cartoon Animation and Web Game Design.

LearningStation has spent 10 years supporting schools' goals for instruction and assessment with a variety of online solutions, from interactive learning software to fully customized web portals.

The story-centered curriculum developed by ISL places students into an environment where they become "virtual interns" with a high-tech company. The students meet with bosses, customers and co-workers and receive important emails, voicemails and video messages necessary to complete their real world projects.

"Today's digital learner needs the same level of interactivity in the classroom that they get at home," says Steve Waddell, owner and lead developer of I Support Learning. "We take their passions and interests and use that to teach them skills that go beyond technology and into math, science, language, and life skills. They want their learning to be relevant and that's what we deliver."

"This partnership furthers our efforts to provide rich opportunities for authentic, engaging learning that is easy for schools to implement," said LearningStation CEO Jim Kirchner. "We see tremendous promise in the pairing of I Support Learning's virtual learning curriculum and LearningStation's Education Desktop for today's digital learners."

The two companies will be exhibiting this week at the Florida Educational Technology Conference (FETC) in Orlando, Fla. Through the end of February 2007, a special introductory offer provides schools a discounted price on an Online Virtual Learning Suite that bundles the ISL curriculum with LearningStation's Education Desktop, Education Backpack and Discussion Forum solutions.

MORE

**About I Support Learning, Inc.**

ISL ([www.isupportlearning.com](http://www.isupportlearning.com)) is a dedicated team of developers whose goal is to revolutionize learning through engaging real world interaction. The story-centered curricula are designed to create and support life-long learners and make education relevant and engaging. Taking the passion and interests of students and allowing them to explore and develop new ideas and skills is how we are making learning fun – still challenging and rewarding – but fun.

**About LearningStation**

LearningStation ([www.learningstation.com](http://www.learningstation.com)), a leading provider of customized portal solutions, focuses on helping schools authentically engage students in learning through innovative applications and web-based learning tools. LearningStation has been honored as a 2005 and 2006 SIIA Codie Award finalist, a 2003 Media & Methods Magazine Awards Portfolio recipient, and a recipient of the EdNET 2002 Pioneer Award for significant contributions to the growth of education technology.
